

Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems)

From CRC Press

Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems) From CRC Press

With contributions from top international experts from both industry and academia, **Nano-Semiconductors: Devices and Technology** is a must-read for anyone with a serious interest in future nanofabrication technologies.

Taking into account the semiconductor industry's transition from standard CMOS silicon to novel device structures?including carbon nanotubes (CNT), graphene, quantum dots, and III-V materials?this book addresses the state of the art in nano devices for electronics. It provides an all-encompassing, one-stop resource on the materials and device structures involved in the evolution from micro- to nanoelectronics.

The book is divided into three parts that address:

- Semiconductor materials (i.e., carbon nanotubes, memristors, and spin organic devices)
- Silicon devices and technology (i.e., BiCMOS, SOI, various 3D integration and RAM technologies, and solar cells)
- Compound semiconductor devices and technology

This reference explores the groundbreaking opportunities in emerging materials that will take system performance beyond the capabilities of traditional CMOS-based microelectronics. Contributors cover topics ranging from electrical propagation on CNT to GaN HEMTs technology and applications. Approaching the trillion-dollar nanotech industry from the perspective of real market needs and the repercussions of technological barriers, this resource provides vital information about elemental device architecture alternatives that will lead to massive strides in future development.

Bibliography

- Sales Rank: #5663862 in Books
- Published on: 2011-10-24
- Original language: English
- Number of items: 1
- Dimensions: 1.30" h x 6.40" w x 9.30" l, 2.07 pounds
- Binding: Hardcover
- 599 pages

Editorial Review

About the Author

Krzysztof Iniewski is managing R&D developments at Redlen Technologies, Inc., a start-up company in British Columbia, and is also an Executive Director of CMOS Emerging Teclmologies, Inc.

Users Review

From reader reviews:

Robert Stewart:

Do you have favorite book? If you have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each e-book has different aim as well as goal; it means that book has different type. Some people truly feel enjoy to spend their the perfect time to read a book. They can be reading whatever they acquire because their hobby is actually reading a book. How about the person who don't like reading a book? Sometime, person feel need book after they found difficult problem or perhaps exercise. Well, probably you will want this Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems).

Brady Witt:

Book is to be different for each grade. Book for children until finally adult are different content. As we know that book is very important normally. The book Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems) ended up being making you to know about other understanding and of course you can take more information. It is rather advantages for you. The publication Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems) is not only giving you considerably more new information but also being your friend when you sense bored. You can spend your spend time to read your guide. Try to make relationship using the book Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems). You never really feel lose out for everything when you read some books.

Pablo McNamara:

Nowadays reading books be a little more than want or need but also work as a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge your information inside the book that improve your knowledge and information. The data you get based on what kind of reserve you read, if you want drive more knowledge just go with education books but if you want experience happy read one having theme for entertaining such as comic or novel. The Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems) is kind of guide which is giving the reader capricious experience.

Nancy Herman:

Is it you who having spare time after that spend it whole day by means of watching television programs or just laying on the bed? Do you need something totally new? This Nano-Semiconductors: Devices and Technology (Devices, Circuits, and Systems) can be the response, oh how comes? A fresh book you know. You are so out of date, spending your spare time by reading in this completely new era is common not a nerd activity. So what these books have than the others?
