Editorial Review

Review

"A thorough, easy reading, liberal arts text that covers the major topics in good detail; has an ample selection of exercises and examples; and includes several additional topics that can be covered if desired."

"I think that the order of the sections is very distinct. It was one of the main reasons that we initially chose the book because the first 5 chapters were our exact course. I also think that it is more cohesive than other texts. Other publishers seems to just stick in new chapters from edition to edition without making sure the notation is the same or the vocabulary is the same, one of the nicest differences about this book is that it just feels like a lot of thought was put into it."

About the Author

David Johnson earned a Bachelor's degree in Mathematics and a Bachelor's degree in Psychology (with an emphasis on Learning Theory), from the University of California at Santa Cruz, and a Master's degree in Mathematics from the University of California at Berkeley. After several years working as an academic counselor at Berkeley, he became a Professor of Mathematics at Diablo Valley College (DVC). He has taught DVC's liberal arts math course regularly for about 25 years, using Mathematics a Practical Odyssey. Other favorite courses include Intermediate Algebra, all three semesters of Calculus, and Differential Equations.

Thomas Mowry earned a Bachelor's degree and a Master's degree in Mathematics from Michigan Technological University, in Houghton, Michigan. He began his college teaching career at City College of San Francisco and then went on to teach at San Francisco State University, Golden Gate University, and Cogswell College. He has been a professor of mathematics at Diablo Valley College, Pleasant Hill, California since 1985, where he has taught the complete gamut of courses from arithmetic to differential equations. He has served as department chair at DVC for the last seven years. Along with co-author, David Johnson, he created a college-level, transferable mathematics course (at DVC) designed for students in the liberal arts. As no appropriate textbooks were available for this course, he and David created Mathematics: A Practical Odyssey, which was first published in 1992.
