Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport) By Tim Horberry

Acceptance of new technology and systems by drivers is an important area of concern to governments, automotive manufacturers and equipment suppliers, especially technology that has significant potential to enhance safety. To be acceptable, new technology must be useful and satisfying to use. If not, drivers will not want to have it, in which case it will never achieve the intended safety benefit. Even if they have the technology, drivers may not use it if it is deemed unacceptable, or may not use it in the manner intended by the designer. At worst, they may seek to disable it.

This book brings into a single edited volume the accumulating body of thinking and research on driver and operator acceptance of new technology. Bringing together contributions from international experts from around the world, the editors have shaped a book that covers the theory behind acceptance, how it can be measured and how it can be improved. Case studies are presented that provide data on driver acceptance of a wide range of new and emerging vehicle technology.

Although driver acceptance is the central focus of this book, acceptance of new technology by operators in other domains, and across cultures, is also investigated. Similarly, perspectives are derived from domains such as human computer interaction, where user acceptance has long been regarded as a key driver of product success.

This book comes at a critical time in the history of the modern motor vehicle, as the number of new technologies entering the modern vehicle cockpit rapidly escalates. The goal of this book is to inspire further research and development of new vehicle technology to optimise user acceptance of it; and, in doing so, to maximise its potential to be useful, satisfying to use and able to save human life.

Editorial Review

About the Author

Michael A. Regan is a Professor in Transport and Road Safety (TARS) Research in the School of Aviation at the University of New South Wales, in Sydney, Australia. Before that he held research appointments with the French Institute of Science and Technology for Transport, Development and Networks (IFFSTAR) in Lyon, France, and the Monash University Accident Research Centre in Melbourne, Australia. Mike's current research interests focus on human interaction with and acceptance of advanced driver assistance systems, driver distraction and inattention, use of instrumented vehicles for naturalistic observation of driving behaviour, and aviation safety. He sits on the editorial boards of five peer-reviewed journals, including Human Factors, is the author of more than 200 publications, including two books, and sits on several expert committees in transport safety. He is the 25th President of the Human Factors and Ergonomics Society of Australia. Tim Horberry is Associate Professor of Human Factors at the University of Queensland, Australia. He is also a Senior Research Associate at the University of Cambridge, UK, and before that he was at the UK's Transport Research Laboratory. Tim has published his work widely, including four books published either by Ashgate or CRC press: The Human Factors of Transport Signs (2004) and Human Factors in the Maritime Domain (2008), Understanding Human Error In Mine Safety (2009) and Human Factors for the Design, Operation and Maintenance of Mining Equipment (2010). Tim has undertaken many applied human factors research projects in Australia, the UK and Europe for organisations such as the European Union, Australian Research Council and the UK Department for Transport. Currently Tim is leading several projects in the minerals industry that are examining acceptance of new technology for mining vehicles - including collision detection systems or shovel automation. Alan Stevens is Chief Research Scientist and Research Director, Transpor

Users Review

From reader reviews:

Brenda Gregg:

Why don't make it to become your habit? Right now, try to ready your time to do the important work, like looking for your favorite publication and reading a reserve. Beside you can solve your problem; you can add your knowledge by the e-book entitled Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport). Try to the actual book Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport) as your friend. It means that it can be your friend when you feel alone and beside regarding course make you smarter than ever. Yeah, it is very fortunated for yourself. The book makes you much more confidence because you can know everything by the book. So, we should make new experience and knowledge with this book.

Kayla Merritt:

Have you spare time to get a day? What do you do when you have much more or little spare time? Yep, you can choose the suitable activity to get spend your time. Any person spent their particular spare time to take a wander, shopping, or went to the actual Mall. How about open or read a book entitled Driver Acceptance of

New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport)? Maybe it is to become best activity for you. You realize beside you can spend your time together with your favorite's book, you can better than before. Do you agree with it is opinion or you have various other opinion?

David Barthel:

The book Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport) can give more knowledge and also the precise product information about everything you want. So just why must we leave a very important thing like a book Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport)? Wide variety you have a different opinion about reserve. But one aim that will book can give many information for us. It is absolutely appropriate. Right now, try to closer with the book. Knowledge or information that you take for that, you may give for each other; you may share all of these. Book Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport) has simple shape nevertheless, you know: it has great and big function for you. You can search the enormous world by open up and read a reserve. So it is very wonderful.

Barry Altman:

The reason? Because this Driver Acceptance of New Technology: Theory, Measurement and Optimisation (Human Factors in Road and Rail Transport) is an unordinary book that the inside of the e-book waiting for you to snap the item but latter it will jolt you with the secret that inside. Reading this book adjacent to it was fantastic author who write the book in such incredible way makes the content interior easier to understand, entertaining means but still convey the meaning completely. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This excellent book will give you a lot of advantages than the other book have such as help improving your proficiency and your critical thinking technique. So , still want to postpone having that book? If I have been you I will go to the guide store hurriedly.
