Environmental Chemistry By Colin Baird, Michael Cann

Global warming. Renewable energy. Hazardous waste. Carbon footprints. These and other environmental topics are being discussed and debated more vigorously than ever. Colin Baird and Michael Cann's *Environmental Chemistry* is the only textbook that explores the chemical processes and properties underlying these crucial issues at an accessible, introductory level (only general chemistry is a prerequisite).

With authoritative coverage that balances soil, water, and air chemistry, the new edition again focuses on the environmental impacts of chemical production and experimentation, offering additional "green chemistry" sections and new case studies, plus updated coverage of instrumental analysis, farming applications, bioengineering, and biotechnology.
