

The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology)

From Springer

The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) From Springer

Molecular chaperones are a fundamental group of proteins that have been identified only relatively recently. They are key components of a protein quality machinery in the cell which insures that the folding process of any newly-synthesized polypeptide chain results in the formation of a properly folded protein and that the folded protein is maintained in an active conformation throughout its functional lifetime. Molecular chaperones have been shown to play essential roles in cell viability under both normal and stress conditions. Chaperones can also assist in the unfolding and degradation of misfolded proteins and in disaggregating preformed protein aggregates. Chaperones are also involved in other cellular functions including protein translocation across membranes, vesicle fusion events, and protein secretion.

In recent years, tremendous advances have been made in our understanding of the biology, biochemistry, and biophysics of function of molecular chaperones. In addition, recent technical developments in the fields of proteomics and genomics allowed us to obtain a global view of chaperone interaction networks. Finally, there is now a growing interest in the role of molecular chaperones in diseases.

This book will provide a comprehensive analysis of the structure and function of the diverse systems of molecular chaperones and their role in cell stress responses and in diseases from a global network perspective. ?

Editorial Review

From the Back Cover

Molecular chaperones are a fundamental group of proteins that have been identified only relatively recently. They are key components of a protein quality machinery in the cell which insures that the folding process of any newly-synthesized polypeptide chain results in the formation of a properly folded protein and that the folded protein is maintained in an active conformation throughout its functional lifetime. Molecular chaperones have been shown to play essential roles in cell viability under both normal and stress conditions. Chaperones can also assist in the unfolding and degradation of misfolded proteins and in disaggregating preformed protein aggregates. Chaperones are also involved in other cellular functions including protein translocation across membranes, vesicle fusion events, and protein secretion.

In recent years, tremendous advances have been made in our understanding of the biology, biochemistry, and biophysics of function of molecular chaperones. In addition, recent technical developments in the fields of proteomics and genomics allowed us to obtain a global view of chaperone interaction networks. Finally, there is now a growing interest in the role of molecular chaperones in diseases.

This book will provide a comprehensive analysis of the structure and function of the diverse systems of molecular chaperones and their role in cell stress responses and in diseases from a global network perspective. ?

Users Review

From reader reviews:

James Bardsley:

The knowledge that you get from The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) will be the more deep you searching the information that hide in the words the more you get serious about reading it. It does not mean that this book is hard to understand but The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) giving you excitement feeling of reading. The copy writer conveys their point in particular way that can be understood through anyone who read this because the author of this book is well-known enough. This particular book also makes your personal vocabulary increase well. So it is easy to understand then can go with you, both in printed or e-book style are available. We highly recommend you for having this kind of The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) instantly.

Kirk Qualls:

Reading a e-book can be one of a lot of pastime that everyone in the world really likes. Do you like reading book consequently. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new data. When you read a publication you will get new information due to the fact book is one of many

ways to share the information or perhaps their idea. Second, looking at a book will make you more imaginative. When you looking at a book especially fictional book the author will bring you to definitely imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other individuals. When you read this The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology), you could tells your family, friends as well as soon about yours book. Your knowledge can inspire the mediocre, make them reading a publication.

Gail Cote:

A lot of people always spent their particular free time to vacation or even go to the outside with them household or their friend. Do you realize? Many a lot of people spent many people free time just watching TV, or maybe playing video games all day long. If you need to try to find a new activity honestly, that is look different you can read a book. It is really fun for you. If you enjoy the book that you simply read you can spent all day long to reading a book. The book The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) it doesn't matter what good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. When you did not have enough space to create this book you can buy often the e-book. You can m0ore very easily to read this book through your smart phone. The price is not to fund but this book provides high quality.

Kerry Maye:

Reading a reserve make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is published or printed or illustrated from each source that will filled update of news. With this modern era like right now, many ways to get information are available for an individual. From media social just like newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your knowledge by that book. Are you hip to spend your spare time to spread out your book? Or just searching for the The Molecular Chaperones Interaction Networks in Protein Folding and Degradation (Interactomics and Systems Biology) when you essential it?
