Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology)

By Edgar Martínez Moro

Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology) By Edgar Martínez Moro

Algebraic & geometry methods have constituted a basic background and tool for people working on classic block coding theory and cryptography. Nowadays, new paradigms on coding theory and cryptography have arisen such as: Network coding, S-Boxes, APN Functions, Steganography and decoding by linear programming. Again understanding the underlying procedure and symmetry of these topics needs a whole bunch of non trivial knowledge of algebra and geometry that will be used to both, evaluate those methods and search for new codes and cryptographic applications. This book shows those methods in a self-contained form.

Contents:

- Sage: A Basic Overview for Coding Theory and Cryptography *(D Joyner)*
- Aspects of Random Network Coding *(O Geil and C Thomsen)*
- Steganography from a Coding Theory Point of View *(C Munuera)*
- An Introduction to LDPC Codes *(I Márquez-Corbella & E Martínez-Moro)*
- Numerical Semigroups and Codes *(M Bras-Amorós)*
- Codes, Arrangements and Matroids *(R Jurrius & R Pellikaan)*

Readership: Researchers in coding theory and cryptography.

Editorial Review

From the Inside Flap

Algebraic & geometry methods have constituted a basic background and tool for people working on classic block coding theory and cryptography. Nowadays, new paradigms on coding theory and cryptography have arisen such as: Network coding, S-Boxes, APN Functions, Steganography and decoding by linear programming. Again understanding the underlying procedure and symmetry of these topics needs a whole bunch of non trivial knowledge of algebra and geometry that will be used to both, evaluate those methods and search for new codes and cryptographic applications. This book shows those methods in a self-contained form.

Users Review

From reader reviews:

Daryl Biddle:

Hey guys, do you desires to finds a new book you just read? May be the book with the concept Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology) suitable to you? Typically the book was written by well known writer in this era. The book untitled Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology)is the one of several books that everyone read now. This specific book was inspired lots of people in the world. When you read this reserve you will enter the new way of measuring that you ever know just before. The author explained their thought in the simple way, thus all of people can easily to comprehend the core of this book. This book will give you a lots of information about this world now. To help you to see the represented of the world within this book.

Helen Perez:

Reading a reserve can be one of a lot of task that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new data. When you read a book you will get new information simply because book is one of a number of ways to share the information or even their idea. Second, reading through a book will make anyone more imaginative. When you reading a book especially fictional works book the author will bring one to imagine the story how the character types do it anything. Third, you can share your knowledge to some others. When you read this Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology), you can tells your family, friends as well as soon about yours guide. Your knowledge can inspire average, make them reading a e-book.

Deborah Wilkerson:

The book untitled Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology) contain a lot of information on the item. The writer explains her idea with easy means. The

language is very clear to see all the people, so do not necessarily worry, you can easy to read that. The book was compiled by famous author. The author brings you in the new time of literary works. You can actually read this book because you can read on your smart phone, or program, so you can read the book throughout anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site along with order it. Have a nice examine.

Richard Vedder:

As we know that book is essential thing to add our know-how for everything. By a e-book we can know everything we would like. A book is a range of written, printed, illustrated as well as blank sheet. Every year was exactly added. This book Algebraic Geometry Modeling in Information Theory: 8 (Series on Coding Theory and Cryptology) was filled concerning science. Spend your free time to add your knowledge about your science competence. Some people has distinct feel when they reading a new book. If you know how big good thing about a book, you can really feel enjoy to read a book. In the modern era like currently, many ways to get book which you wanted.
