Waste to Energy: Opportunities and Challenges for Developing and Transition Economies (Green Energy and Technology) From Avraam Karagiannidis

Solid waste management is currently a major issue worldwide with numerous areas reaching critical levels. Many developing countries and countries in transition still miss basic waste management infrastructure and awareness. It is here that many of the solid waste management problems and challenges are currently being faced. As such, waste-to-energy (WTE) consists of a proven and continuously developing spectrum and range of technologies in a number of (mostly) developed countries. However, its integration in developing countries and systems in transition is often faced with scepticism and a complex set of barriers which are quite unique and differ greatly from those where WTE has been validated and applied over the years. *Waste-to-Energy: Opportunities and Challenges for Developing and Transition Economies* will address this issue both theoretically and using concrete examples, including:

- contributions from numerous scholars and practitioners in the field,
- useful lessons and rules of thumb,
- both successful and failed cases, and
- real-life examples and developments.

Waste-to-Energy approaches this dynamic aspect of environmental engineering and management in a methodical and detailed manner making it an important resource for SWM planners and facility operators as well as undergraduate and post graduate students and researchers.

Donald Bonilla:

As a university student exactly feel bored for you to reading. If their teacher inquired them to go to the library or make summary for some guide, they are complained. Just little students that has reading's spirit or real their passion. They just do what the educator want, like asked to go to the library. They go to presently there but nothing reading critically. Any students feel that looking at is not important, boring in addition to can't see colorful pics on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this period, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. So , this Waste to Energy: Opportunities and Challenges for Developing and Transition Economies (Green Energy and Technology) can make you really feel more interested to read.
